PROFESSIONAL SUMMARY

Senior iOS Engineer with around 5 years of end-to-end ownership shipping production apps across healthcare, IoT, e-commerce, and urban mobility. Sole iOS architect on multiple live App Store products — specializing in SwiftUI, Clean Architecture, StoreKit 2 monetization, and HIPAA-conscious security patterns. Proven track record of cutting delivery timelines, improving performance metrics, and leading junior engineers in distributed Agile teams.

TECHNICAL SKILLS

Languages	Swift, Dart, Python, Objective-C
iOS / Apple SDK	SwiftUI, UIKit, SwiftData, Core Data, AVFoundation, CoreBluetooth, HealthKit, Swift Charts, Core Location, MapKit, WidgetKit, StoreKit 2, CoreAnimation, EventKit, CloudKit, Cocoa Touch
Swift Concurrency	async/await, actors, Combine, Grand Central Dispatch (GCD), Operation Queues, RxSwift
Architecture	Clean Architecture, MVVM-C, MVVM, MVC, Protocol-Oriented Programming, Modular Architecture, Dependency Injection
Networking	URLSession, Alamofire, RESTful APIs, GraphQL, WebSockets
AI / ML	Core ML, Vision Framework, OpenAI API, on-device inference, LLM integration
Hardware & Wearables	Bluetooth 5.0 / BLE, Lefu Smart Scale, Ring & Ankle devices, IoT sensor integration, GATT protocol
Flutter	BLoC, Riverpod, GetIt DI, GoRouter, Dio, Freezed, Lottie, Material/Cupertino UI
Testing & QA	XCTest, TDD, Unit Testing, UI Testing, Instruments, Memory & CPU Profiling, Leak Detection
CI/CD & Tooling	Xcode, SPM, CocoaPods, GitHub Actions, Fastlane, TestFlight, App Store Connect, Xcode Cloud, Jira, Scrum
Security	Keychain, SSL Pinning, OWASP Mobile Top 10, Pen-Test Remediation, HIPAA patterns
Payments & IAP	Apple Pay, Stripe, VR Payment, In-App Purchases (StoreKit), In-App Subscriptions, APNs, FCM

PROFESSIONAL EXPERIENCE

Senior iOS Engineer · Evolve Edge Technologies · Remote, Pakistan

Dec 2025 – Present

Part-time / Concurrent with ILI.DIGITAL (Dec 2025 – Apr 2026) → Full-Time (Apr 2026 – Present)

Dry Revival — Wellness & Recovery App (iOS, App Store Live)

- **Sole iOS owner:** architected and shipped the full product lifecycle — roadmap, Clean Architecture codebase, App Store Connect release cadence, and TestFlight beta distribution — reducing feature delivery time by 30% through modular, feature-isolated SwiftUI components.
- **Hardware integration:** integrated Lefu Smart Scale via Bluetooth to capture body measurement readings in real time, with trend graphs displaying progress over time using custom SwiftUI charts.
- **Monetization:** designed and launched In-App Subscriptions via StoreKit 2 with server-side receipt validation, paywall A/B experiments, and restore flows, directly enabling recurring revenue for the business.
- **CI/CD:** established GitHub Actions + Fastlane + TestFlight pipeline, cutting manual release overhead by ~40% and enabling continuous deployment to internal and beta testers.

OneAI Health — AI-Powered Healthcare App (iOS, Production)

- **Feature delivery:** contributed iOS feature development for a full app redesign across 25+ screens in SwiftUI on a live HIPAA-regulated healthcare platform, working under the tech lead's architecture and direction.
- **Health charts:** designed and built custom SwiftUI charts for steps, calories, sleep, heart rate, and other health metrics, delivering clear visual trends that improved data comprehension for patients and care teams.
- **Wearable integration:** integrated Ring and ankle wearable devices to capture biometric readings, bridging hardware sensor data with the app's health tracking and AI insight pipeline.
- **Security & compliance:** applied HIPAA-conscious patterns — Keychain storage, AES-encrypted Core Data persistence, SSL pinning, and CI/CD via GitHub Actions and TestFlight — across all assigned modules.

Software Engineer — iOS & Flutter · ILI.DIGITAL · Lahore, Pakistan (On-site)

Sep 2023 – Apr 2026

KSC App — Event & Commerce Platform (Swift/UIKit)

- **Performance:** consolidated 7–8 API round-trips down to 1–2 via endpoint batching and URLSession caching, reducing average screen load time by ~60% and eliminating timeout errors reported in App Store reviews.
- **Checkout:** engineered one-tap MiniShop checkout with VR-Payment gateway integration and PCI-compliant token handling, increasing completed purchase rate and reducing cart abandonment.
- **Offline access:** implemented Core Data offline ticket storage with background sync, ensuring 100% feature availability for users in low-connectivity venue environments.
- **Engagement:** integrated Emarsys SDK for geolocation push notifications and deep linking, contributing to a 35% increase in user engagement over the following quarter.
- **Security hardening:** remediated SSL pinning gaps, token-handling vulnerabilities, and storage issues following external pen-test audit, achieving a clean security re-audit pass.

StayX — Gamification Learning App (Flutter)

- **Architecture:** designed state management system using BLoC, GetIt dependency injection, and Freezed sealed classes, producing predictable, fully unit-tested game and learning flows.
- **UX:** integrated Dio interceptors for resilient API handling, GoRouter for typed navigation, and Lottie animations, delivering a polished gamified experience with zero navigation regressions post-launch.
- **Team leadership:** delivered 30% of total mobile development in a 5-person cross-functional team; led weekly code reviews, enforced TDD standards, and mentored 2 junior engineers — both promoted within 6 months.

Volocopter — Urban Air Mobility Booking App (iOS)

- **Architecture:** owned flight booking API integration and Stripe payment flows using Clean Architecture with modular SDKs and zero-downtime Core Data migrations.
- **Reusability:** built a reusable SwiftUI component library shared across 3 feature teams, cutting UI development time by ~15% per sprint.
- **Quality:** authored XCTest unit and UI tests for all critical booking flows, achieving 85%+ test coverage on core modules and reducing QA regression cycles.

Software Engineer — iOS · BrainX Technologies · Lahore, Pakistan (On-site)

Nov 2021 – Aug 2023

Go Power App — Real-Time IoT Solar Energy Monitor

- **IoT integration:** engineered real-time BLE 5.0 solar controller monitoring in Swift, optimizing GATT protocol communication to reduce data latency by ~35% and improve device sync reliability across intermittent connections.
- **UX performance:** redesigned core UI with memory management optimizations and async rendering, achieving a 20% improvement in user satisfaction scores per App Store feedback and QA benchmarks.

Driven Day — iOS Productivity Planner (UIKit / MVVM)

- **Delivered 50+ custom UIKit screens** under strict MVVM architecture with Google Calendar and iCloud sync integration, driving a 35% boost in cross-platform engagement and a measurable increase in 30-day retention.
- **Implemented** task creation, file uploads, and progress tracking with offline-first Core Data persistence, reducing churn among power users by ensuring full functionality without connectivity.

Additional Projects

- **Feedback SDK:** extended theming APIs with dynamic color support and improved developer documentation, increasing internal SDK adoption by 20% across 4 active projects.
- **SHCD (Vehicle Marketplace):** built image-based buy/sell listings with Stripe payment integration, improving checkout reliability and transaction success rate.
- **BH4H (Mental Health):** delivered a guided meditation app end-to-end with offline-first Core Data architecture using Swift & UIKit.
- **Baritastic (Objective-C):** implemented full Spanish localization and multi-screen UI enhancements, expanding accessible user base.

EDUCATION

Bachelor of Science in Computer Science

Jan 2017 – May 2021

Sukkur IBA University, Pakistan · Algorithms · Data Structures · OS · AI · Data Science · Database Systems

AWARDS & RECOGNITION

- **OGDCL National Talent Hunt Scholar:** selected among top 100 of 5,000+ nationwide applicants; awarded fully funded bachelor's scholarship by Oil & Gas Development Company Limited.
- **Math Olympiad – Runner-Up (Sukkur IBA University):** led 4-member team to 2nd place finish.
- **iCOMET Conference Participant:** presented academic work at the International Conference on Computing, Mathematics & Engineering Technologies in 2018, 2019, and 2020.
