

iOS & Flutter Engineer with around 5 years shipping production mobile applications across healthcare, IoT, e-commerce, and urban mobility. Deep expertise in Swift, SwiftUI, UIKit, Xcode, and Flutter - Clean Architecture, AI/ML integration, security hardening, and full SDLC ownership from development through App Store Connect deployment in distributed Agile/Scrum teams.

Skills

- **Programming Languages:** Swift, Dart, Python, Objective-C
- **Architectures & Design Patterns:** MVC, MVVM, MVVM-C, Clean Architecture, Protocol-Oriented Programming,
- **iOS Development:** SwiftUI, UIKit, Core Data, SwiftData, Auto Layout, AVFoundation, Bluetooth, Core Location, Core Animations, MapKit, WidgetKit, Cocoa Touch, Dependency Injection
- **Concurrency & Multithreading:** async/await, actors, Grand Central Dispatch (GCD), Operation Queues
- **Networking:** URLSession, Alamofire, RESTful APIs, GraphQL, WebSockets
- **Reactive & Asynchronous Programming:** Combine, RxSwift
- **AI/ML:** Core ML, Vision Framework, OpenAI API, on-device inference
- **Performance & Optimization:** Instruments, Memory & CPU Profiling, Leak Detection, App Startup Optimization
- **Testing & QA:** Unit Testing, UI Testing (XCTest), Test-Driven Development (TDD)
- **Flutter (Intermediate):** State Management (Provider), GoRouter, Material/Cupertino UI, Widgets, Animations
- **Tools & Collaboration:** Xcode, SPM, Cocoa Pods, Git, GitHub, GitHub Actions, Jira, Agile/Scrum, CI/CD
- **Push Notifications & Messaging:** Firebase Cloud Messaging (FCM), Apple Push Notification Service (APNs)
- **Payments & IAP:** Apple Pay, Stripe, VR Payment, In-App Purchases (StoreKit), In-App Subscriptions
- **Security:** Keychain, SSL Pinning, Pen-Test Remediation, OWASP Mobile Top 10, Bluetooth 5.0

Experience

Senior Software Engineer at Evolve Edge, Lahore, Pakistan (Remote) Dec 2025 - Present

- **Dry Revival, Wellness and Recovery App:**
 - Own and lead end-to-end iOS development as the sole iOS owner, managing roadmap, architecture, release cadence, and App Store Connect operations.
 - Designed a modular SwiftUI and Clean Architecture codebase with dependency injection and feature-isolated modules, cutting feature delivery time by 30%.
 - Leading a full UI/UX revamp across 40+ screens with a reusable component library, dynamic theming.
 - Implemented In-App Subscriptions using StoreKit 2 with server-side receipt validation, restore flows, and paywall experiments, unlocking recurring revenue.
- **OneAI Health - AI-Powered Healthcare App:**
 - Contributing to iOS development on a live healthcare platform, owning feature delivery for a full app redesign across 25+ screens using SwiftUI.
 - Driving AI-powered features including LLM-backed health insights and smart data summaries, reducing time-to-insight for patients and care teams.
 - Applying HIPAA-conscious patterns — Keychain storage, encrypted persistence, CI/CD via GitHub Actions and TestFlight across all new and refactored modules.
 - Refactored legacy codebase and optimized performance, improving stability and maintainability.

Software Engineer at ILI.DIGITAL, Lahore, Pakistan (On-site) Sep 2023 - Apr 2026

- **KSC App:**
 - Implemented one-tap MiniShop checkout with VR-Payment gateway, streamlining the purchase flow.
 - Reduced API round-trips from 7–8 to 1–2 via endpoint consolidation and caching, improved performance.
 - Added Core Data for offline ticket access, ensuring seamless functionality without internet connectivity.
 - Integrated Emarsys SDK for geolocation push + deep linking and Core Data offline ticket access, contributing to a 35% increase in user engagement.
 - Refactored legacy codebase and optimized performance, improving stability and maintainability.
- **StayX Gamification Learning App:**
 - Architected with BLoC, GetIt DI, and Freezed sealed classes for predictable, testable state management across game and learning flows.
 - Integrated Dio interceptors, GoRouter navigation, and Lottie animations for a reliable and engaging gamified UX.
 - Delivered 30% of mobile development in a 5-person team; led code reviews, enforced TDD practices, and mentored junior engineers.
- **Volocopter:**
 - Collaborated with a cross-functional iOS team, enabling users to seamlessly book flights through the app.
 - Owned booking API integration and payment flows using Clean Architecture with modular SKs and Core Data migrations.
 - Built reusable SwiftUI component library, cut UI dev time ~15%; authored XCTest unit and UI tests for critical booking flows.

- **Go Power App (IoT):**
 - Integrated real-time solar controller monitoring, enabling users to seamlessly track energy performance.
 - Optimized Bluetooth 5.0 communication, reducing data latency and improving device sync reliability.
 - Enhanced app responsiveness through user-friendly UI designs, leading to 20% better user satisfaction.
- **Feedback SDK:**
 - Extended SDK functionality by adding dynamic colors, increasing customization flexibility across multiple apps.
 - Improved adoption by 20% within internal projects by enhancing API and developer documentation.
- **Driven Day (DD):**
 - Developed a feature-rich iOS planner app with 50+ custom UIKit screens, adhering to MVVM Architecture
 - Integrated Google Calendar & iCloud sync, boosting user engagement by 35%.
 - Implemented task creation, file uploads, and progress tracking, resulting in retention increase.
- **Baritastic (Objective-C):**
 - Implemented Spanish language localization, expanding app accessibility to a wider user base.
 - Enhanced multiple UI screens for improved user experience and consistency with iOS guidelines.
 - Collaborated with the existing team to ensure smooth integration of Objective-C features with modern iOS frameworks.
- **Second Hand Car Dealers (SHCD):**
 - Built a buy & sell platform for vehicles with detailed image-based listings that drove higher engagement.
 - Integrated Stripe payment gateway, increasing transaction success rate and improving checkout reliability.
 - Designed modular components, reducing development time for new features.
- **Balanced Healing For Heroes (BH4H):**
 - Delivered a mental health app end-to-end using Swift & UIKit, providing users with guided meditation.
 - Architected app modules for scalability and maintainability, enabling smooth addition of new wellness features.
 - Implemented offline-first data access, ensuring consistent user experience with or without connectivity.

Leadership and Awards

- **Math Olympiad – Runner-Up (Sukkur IBA University):**
 - Led a team of 4 members and secured 2nd place, awarded an HP Core i7 laptop.
- **OGDCL National Talent Hunt Program Scholar:**
 - Selected among top 100 students out of 5,000 nationwide.
 - Awarded fully funded scholarship for bachelor by Oil & Gas Development Company Limited.
- **International Conference on Computing, Mathematics & Engineering Technologies (iCOMET):**
 - Participated in 2018, 2019, and 2020 editions, showcasing academic engagement.

Education

BS Computer Science at Sukkur IBA University, Pakistan

May 2021

- **Relevant Coursework:**
 - Object-Oriented Programming & Design
 - Algorithms
 - Data Structures
 - Operating Systems
 - Database Systems
 - Data Mining
 - Data Science
 - Digital Image Processing
 - Artificial Intelligence
